

Elin O'Brien, PhD, CCC-SLP
Assistant Professor
Communication Sciences & Disorders

= Acquired impairment of language

may be impaired

means that the impairment is not from birth

The etiology (medical cause) may be infection (such as herpes encephalitis - this is rare), or progressive neurological disease, traumatic brain injury, brain infection (such as herpes encephalitis - this is rare), or progressive neurological disease

Example: people with aphasia

Example: **Broca's aphasia**

(see the book 'Broca's Aphasia' by G. B. Levy)
